OBJECTIVE

Innovative Data Scientist and AI Engineer with hands-on experience architecting predictive ML models, advanced NLP pipelines (RAG/LLMs), and scalable data infrastructures. Adept at bridging the gap between complex data analysis and production-ready software. Seeking a challenging Data Science or Data Analyst position to leverage expertise in Python, SQL, and AI-driven analytics to transform raw data into strategic business insights.

EXPERIENCE

Freelance AI Engineer & Full-Stack 06/2023 - Present
A9i KDD Innovations Technologies LLP

FinLair (B2B AI-Powered Legal & Financial SaaS)

- Collaborated with a full-stack engineering team to architect a secure, private B2B web application enabling legal and financial professionals to ingest, analyze, and export complex documents.
- Co-developed an advanced Natural Language Processing (NLP) pipeline, leveraging LLMs and Retrieval-Augmented Generation (RAG) to power interactive document Q&A, selective summarization, and automated clause extraction.
- Optimized output quality and mitigated LLM hallucinations across nine AI modules by deploying comprehensive evaluation and observability pipelines via Ragas, LangSmith, and PyTest in a FastAPI environment.
- Engineered data-driven analytical features, including multi-document comparison for insight generation, sentiment analysis, and automated compliance checking against regulatory standards.

Junglore & Explore Jungles (AI-Powered Tourism Ecosystem)

- Contributed to the end-to-end Full-Stack architecture (React/Node.js) and DevOps pipeline for the primary website and the Explore Jungles sub-platform.
- Co-Developed and integrated Predictive ML Models and AI Chatbots to automate customer inquiries and forecast booking trends based on historical safari data.
- Developed an automated QA testing pipeline for conversational AI using PyTest, integrating data-driven user-feedback mechanisms to iteratively enhance chatbot response accuracy.
- Designed and managed relational databases (SQL) and optimized queries to handle high-concurrency traffic during peak booking seasons.

House of Junglore (E-commerce Data & Operations)

- Led the end-to-end technical configuration and launch of a scalable Shopify platform, architecting complex business logic for automated shipping, regional taxation, and real-time inventory tracking.
- Directed the platform's analytics strategy, extracting and analyzing sales, traffic, and user behavior data to drive targeted UI/UX optimizations and increase overall conversion rates.
- Integrated third-party apps and analytics tracking tools to streamline operational workflows and create automated reporting dashboards.
- Optimized frontend asset delivery and theme architecture to achieve sub-2-second page load speeds, establishing rigorous technical SEO and mobile-responsiveness baselines for the initial production launch.

SKILLS

Programming Languages	Python, R, SQL, JavaScript
AI & Machine Learning	NLP, RAG, LLMs, Predictive Modeling, Deep Learning
Frameworks & Web	FastAPI , Next.js , Flask , BeautifulSoup
Technical Competencies	ETL, Data Modeling, DAX, Statistical Analysis, Query Optimization
Soft Skills	Analytical Thinking, Teamwork, Problem Solving

PROJECTS

Toxic Comment Detection model. 10/2022 - 04/2023

- Developed a toxic comment detection model using deep learning techniques, achieving robust classification performance on a multi-label dataset with over 100,000 comments.
- Implemented preprocessing pipelines and text vectorization strategies to handle unstructured text data efficiently, ensuring model readiness for deployment. The preprocessing was performed using Python, leveraging libraries like NLTK and TensorFlow for efficient text manipulation and LSTM model training.
- **Technologies:** Python, TensorFlow, NLTK, LSTM, Deep Learning

Sales Insights using PowerBI. 2024

- Developed dynamic Power BI dashboards to visualize sales trends, enabling real-time data-driven insights that empowered the company to optimize sales strategies.
- Implemented advanced DAX calculations and data modeling techniques to provide granular insights into product performance, customer segmentation, and market trends, driving targeted marketing strategies.
- **Technologies:** Power BI, DAX, SQL, Data Modeling

INTERNSHIPS

Virtual Internships

- **Data Visualisation: Empowering Business with Effective Insights**
  Tata, Forage 2023
- **Data Science Virtual Internship Programme by British Airways**
  British Airways, Forage 2023
- **KPMG Virtual Internship**
  KPMG, Forage 2023

CERTIFICATIONS

- **Google Cloud Facilitator Program - Architecting with Google Cloud Certificate.**
  Google 2021
- **MATLAB Onramp course by MathWorks**
  MATLAB 2022
- **Tableau Training**
  Simplilearn 2022
- **Data Analytics - Foundations: Data, Data, Everywhere.**
  Google, Coursera 2024

EDUCATION

Master of Science in Data Science, SIES College Mumbai, Mumbai University 2021 - 2023
CGPA: 9.27

Bachelor of Computer Science, SIES College Mumbai, Mumbai University 2018 - 2021
CGPA: 7.22
